FUEL CELL, ELECTRODE FUEL FUE CELL AND METHOD PRODUCING THEM

Examiner: Adam Arciero S.N. 10/519,105 Art Unit: 1795 December 4, 2009

Detailed Action

1. The Applicant's request for reconsideration filed on August 10, 2009 was received. Claims 27, 30-55 are currently pending. Claims 34-52 are withdrawn.

2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on April 10, 2009.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

4. This application is in conduction for allowance except for the presence of claims 34-52 non-elected without traverse. Accordingly, claims 34-52 are cancelled.

Claim Rejections - 35 USC § 103

5. The claim rejections under 35 U.S.C. 103(a) as being unpatentable over NOBUAKI and WILLIAMS et al. on claim 27-32 and 53-54 are withdrawn, because Applicant's arguments are found to be persuasive.

Claim Rejections - 35 USC § 103

6. The claim rejections under 35 U.S.C. 103(a) as being unpatentable over NOBUAKI, WILLIAMS et al. and VAIDYANATHAN on claim 33 is withdrawn, because Applicant's arguments are found to be persuasive.

7. The claim rejections under 35 U.S.C. 103(a) as being unpatentable over NOBUAKI, WILLIAMS et al. and HAMPDEN-SMITH et al. on claim 55 is withdrawn, because Applicant's arguments are found to be persuasive.

Reasons for Allowance

8. Claims 27-33 and 53-55 are allowed. The following is an examiner's statement of reasons for allowance: The invention of independent claim 27 recites: an electrode used for a fuel cell, the electrode comprising:

a substrate;

a current-collector arranged on one of surfaces of said substrate; and

a catalyst layer arranged on the other surface of said substrate, wherein;

said substrate contains carbon as a principal component;

said current-collector contains an element which will make carbide;

said current-collector and said substrate are bonded to each other and a carbide layer is formed at an interface between said substrate and said current-collector.

The closest prior arts of record, NOBUAKI and WILLIAMS et al., do not teach or suggest wherein a carbide layer is formed at an interface between said substrate and said current-collector. The disclosure of the instant application teaches of using a palladium powder brazing material and using a brazing method to bond the electrode and current collector together (pg. 13, Example 2). After said brazing material is coated onto the current-collector and the carbon paper (electrode) was put on said brazing material, the resultant is put in a vacuum furnace for a period of time and then naturally cooled, thereby bonding and forming a carbide layer between the carbon paper electrode and the nickel plate collector. NOBUAKI teaches of a fuel cell wherein an electrode and a charge collector are bonded together via adhesive glue. WILLIAMS et al. teaches of using a brazing powder to fuse a collector and an electrode. However, WILLIAMS et al. fails to disclose the specifics of the brazing method of the present application and heating the brazed assembly so as to form a carbide layer between the charge collector and the electrode. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
